HITACHI Inspire the Next

Hitachi Cambridge 77" Interactive Whiteboards

The Cambridge Board is the most advanced interactive teaching aid on the market, offering unparalleled durability, speed and accuracy.

Linked to a PC and projector it can help build exciting dynamic and inspirational lessons through its unique suite of software, which is easy to use and fully customisable. To match its versatility, the Cambridge Board can capture data faster than most people can write, so there are none of the delays inherent in some competitive products, which can interrupt the natural rhythm of a teacher in full creative flow. Capturing pen strokes at around 3 metres per second at a resolution higher than most desktop printers, the Cambridge Board is the fastest and most accurate whiteboard available. Designed from the outset for teaching environments, the Cambridge Board is the toughest in its class, with robust electromagnetic technology, providing a screen that is very difficult to damage, even under the rigorous write/clean cycles of conventional whiteboard use.

PRICE TO YOU £550 + VAT

- Versatile and easy to use Very durable - tough enough to use as an ordinary whiteboard
